for Class C, J & R Connectors

MS90563 & MS90564  
for Class L Connectors

## Dust Caps and Dummy Receptacles Protect Your Investment

Dust Caps protect the mating surfaces of connectors from harsh environments, physical damages and protects the connector from particles and moisture. Prevalent applications span across several industries such as military, aerospace, and industrial markets. Spacecraft metal circular connector dust caps are available for both plug and receptacle connectors.

An optional chain or rope ensures that when the Dust Cap is not in use, it remains in the immediate area of the connector. While the MIL-SPEC has provisions for only two attachment configurations (sash chain or wire rope), Spacecraft manufacturers several additional types, such as; beaded chain, nylon rope, and more — all with a variety of plating finishes.

Dummy Receptacles are protection devices used to protect a disconnected plug from physical damage, as well as from moisture and particle contamination. Attaching unused cables to Dummy Receptacles fully protects the plugs, their mating surfaces and contacts.
